Ben O'Dell
Resource Manager
Delaware Lake
U.S. Army Corps of Engineers
3920 U.S. 23 North
Delaware, OH 43015-9708

Dear Mr. O'Dell:

Enclosed please find: 15 Delta traps
string
directions for assembly of traps
tally sheet(s) for recording moth catches

This should be all the material that is needed for the gypsy moth trapping program at Delaware Lake in 1995.

The pheromone strip has already been stapled to the trap so the trap is ready to be assembled. The traps should be deployed by **June 13** and can be retrieved during the week of **August 31**. The traps should be inspected during the middle of the trapping season to ensure that they have not been stolen or vandalized. If either of these have occurred, replace with a spare trap and note the date of the trap replacement on the tally sheet(s).

By **September 15**, either count the gypsy moths in the traps and return the completed tally sheet(s) or send back the entire trap and the moths will be counted in our office. In either case, send a **map** depicting where the traps were deployed.

If there is an error in the address and/or contact person, please notify us of this change. Please send all information to: Karen Felton, Forestry Technician, Forest Health Protection, USDA Forest Service, 180 Canfield Street, Morgantown, WV 26505.

We thank you for your continued participation in our gypsy moth monitoring program. If you have any questions, please contact me at 304-285-1556.

Sincerely,

KAREN D. FELTON
Forestry Technician
Forest Health Protection
